

Tie Rod End for Auto Steering Systems

This tie rod end connects the steering linkage to the steering knuckle in a vehicle's steering system. It allows for precise steering control and helps maintain proper wheel alignment.

Product Overview

Steering System Precision Component

This tie rod end is a vital component of a vehicle's steering system, designed to connect the steering linkage to the steering knuckle with high reliability. It features a precision-engineered ball joint for smooth articulation and a protective boot to ensure long-term resistance against environmental contaminants. By facilitating precise steering control and maintaining optimal wheel alignment, it serves as an essential part for vehicle handling and safety.

Technical Specifications

Design Features

- Threaded shank for precise adjustability
- Integrated ball joint for smooth articulation
- Protective boot for contamination prevention
- Durable heavy-duty material construction

Performance Attributes

Precise Steering Control • Long-lasting Performance • Contamination Resistant

Application

Auto Steering System, Steering Linkage, Wheel Alignment
