

TIG Welding Machine

This TIG welding machine is designed for TIG welding applications. It features adjustable current and voltage controls and is suitable for welding steel, stainless steel, and aluminum.

Overview

Industrial TIG Welding Solution

The TIG300S is a professional-grade welding machine engineered for demanding industrial TIG welding applications. It offers precise control over current and voltage, ensuring high-quality welds across various materials including steel, stainless steel, and aluminum. Built for reliability, this unit features a robust construction and essential safety integrations like overload protection.
