

Tinned Copper Cable Lug

Tinned copper cable lugs are designed for secure and reliable electrical connections. The tinned finish provides excellent corrosion resistance and conductivity, ensuring long-lasting performance in terminating copper conductors.

Product Overview

A comprehensive range of high-quality lugs designed for utility and network applications, meeting international certification standards.

High-Performance Tinned Copper Lugs

The DTGY series tinned copper cable lugs are engineered for secure and reliable electrical connections in power transmission and distribution systems. Constructed from high-quality copper with a specialized tinned finish, these lugs provide exceptional electrical conductivity while offering superior corrosion resistance. They are designed to meet the rigorous demands of utility networks, cable, and fiber optic applications, ensuring long-lasting performance and durability.

Technical Specifications

Tinned copper construction ensures excellent conductivity and corrosion resistance for reliable termination of copper conductors.

Certifications

CE • ISO • UL

Material & Finish

Tinned Copper

Key Benefits

High Conductivity, Corrosion Resistant, Secure Connection, Durable

Applications

Suitable Applications

- Electrical Power Fittings
- Transmission Systems
- Distribution Systems
- Utility Networks
- Cable & Fiber Optic Networks
