

Titanium Nitride Coated HSS Drill Bit

This titanium nitride coated HSS drill bit is designed for cutting holes in various materials such as wood, metal, and plastic. The coating provides increased durability and longer life.

Product Overview

Versatile Titanium Nitride Coated HSS Drill Bit

This Titanium Nitride Coated HSS drill saw is designed for efficient hole cutting across a variety of materials including wood, metal, and plastic. The specialized coating provides increased durability and a longer operational life compared to standard bits. Engineered for precision, it creates clean, round, and plumb holes while simultaneously creating a flat spot for easier screw driving.

Technical Specifications

Shank Diameter	0.25 inch
Total Length	2.75 inch
Compatible Materials	Wood, Metal, Plastic

Key Features

Coating

Titanium Nitride

Performance Benefits

- Longer tool life
- Greater durability
- Creates flat spot for easier screw insertion
- Produces clean, round, and plumb holes
