

Topkit Tower Crane with 4t Max Load and 48m Jib

This tower crane features a fine appearance and a simple, practical structure for easy maintenance. It is designed for safe operation, with a 4t maximum load and a 48m jib length.

Product Overview

Professional Lifting Performance

The QTZ50 tower crane is a robust solution designed for demanding construction sites, offering a maximum lifting capacity of 4 tons and a 48-meter jib length. Featuring high-quality electrical components from industry-leading suppliers, it ensures stable and reliable operation under heavy loads. Its precision-welded structure and advanced cross-section design provide exceptional stability and reduced swing, making it an ideal choice for large-scale building and infrastructure projects.

Technical Specifications

Rated Lifting Moment	500 KN.m
Maximum Load Capacity	4 t
Jib Length	48 m
Tip Load	1 t

Structural Details

Mast Section Dimensions	1500mm x 1500mm
Welding Methods	CO2 gas protected welding, Full-auto submerged arc welding
