Torque Testing Clamp - Middle Size

This clamp is used for securing samples during torque testing procedures. Its design meets EN71 standards, ensuring accurate and reliable performance in safety assessments.

Product Overview

Precision Torque Testing Clamp

This middle-size torque testing clamp is a specialized instrument designed for precise torque measurement and application in various testing scenarios. Engineered with a robust construction and calibrated mechanism, it allows for the controlled application of torque essential for quality control and product development. The clamp features adjustable settings to accommodate different sample sizes and materials, offering versatility and accuracy in laboratory and industrial settings.

Compliance & Standards

Testing Standards	EN71-1, ISO8124-1, ASTM

Technical Details

Size Category	Middle Size
Primary Function	Clamping samples for torque testing
