

# Tower Uninterruptible Power Supply

This uninterruptible power supply (UPS) is designed for tower configurations. It delivers power protection and battery backup for essential electronic devices.

## Product Overview

### Professional Tower UPS Solution

This tower-style uninterruptible power supply offers reliable power protection for critical server and networking infrastructure. Engineered with an innovative structural design, it features automatic voltage regulation and advanced filter regulators to ensure clean power delivery. Designed for versatility, it supports extensive remote monitoring and management software, making it a high-reliability choice for sensitive equipment.

## Core Features

### Management Features

- Automatic sleep timer for low-power states
- Advanced filter regulator
- Remote monitoring capabilities
- Customizable management models
- Wide software compatibility

### Reliability Standards

High Reliability, Network-Grade, Voltage Regulated

## Technical Specifications

### Protection Systems

AVR • Surge Protection • Intelligent Battery Management

### Form Factor

Tower
