

# Tracked Agricultural Tractor with Rotary Tiller

This compact tractor is designed for agricultural use, featuring a tracked drivetrain and a rotary tiller attachment. It is suited for soil preparation and cultivation tasks.

## ADDITIONAL IMAGES

## Overview

### High-Efficiency Tracked Agricultural Tractor

This specialized tracked agricultural tractor is designed for high-performance soil preparation and cultivation in challenging environments. Featuring a widened rubber track system, it provides low ground pressure for superior mobility in deep mud and paddy fields. The integration of an imported hydrostatic transmission (HST) and advanced hydraulic controls ensures precise operation and ease of use for agricultural professionals.

## Technical Specifications

### Operational Features

- One-lever steering control
- Hydraulic implement lifting
- Self-resecure mechanism for paddy fields
- Three-point suspension system

### Primary Applications

Paddy Fields • Deep Mud Fields • Rigid Soil • General Cultivation

### Drive System

Rubber Tracks, Hydrostatic Transmission, HST
