

Tractor-Driven DC Arc Welding Generator

This tractor-driven DC arc welding generator is engineered to be powered by a tractor. It delivers a stable DC output for high-quality arc welding, making it suitable for various metal types and welding techniques.

Product Overview

Rugged Field Welding Solution

The AX1-400 is a specialized tractor-driven DC arc welding generator engineered for demanding field operations. Designed to harness power directly from a tractor, it provides a highly portable and efficient welding solution for agricultural, construction, and repair environments. This unit delivers a stable DC output, ensuring high-quality welds across various metal types and techniques while maintaining durability in tough working conditions.

Technical Specifications

Model Number	AX1-400
Power Source	Tractor-driven
Output Type	DC Arc

Key Features

Design Benefits

- High portability for off-grid field work
- Durable construction for harsh environments
- Stable DC output for quality welds
- Simplified maintenance design

Ideal Applications	Agricultural, Construction, Field Repair, Mobile Welding
