

Tractor Driven Water Pump for Irrigation

Tractor-driven water pump designed for agricultural irrigation and drainage. It connects to a tractor's PTO shaft for high-volume water transfer.

Product Overview

High-Efficiency Tractor-Driven Water Pump

This centrifugal water pump is specifically engineered for high-volume agricultural irrigation and drainage operations. By utilizing the tractor's Power Take-Off (PTO) shaft, it provides a powerful, mobile solution for water management tasks. Its robust, rigid frame design ensures stability and durability in demanding agricultural environments, making it ideal for effective field irrigation and rapid dewatering.
