

Tractor-Mounted Disc Plough for Soil Preparation

This heavy-duty disc plough is designed for efficient soil preparation. It features independently rotating discs for optimal cutting and turning of soil and is constructed with high-strength steel for durability.

Product Overview

Professional Soil Preparation

This heavy-duty, tractor-mounted disc plough is engineered for high-efficiency soil preparation across diverse agricultural environments. It features independently rotating discs that ensure superior cutting and soil inversion capabilities. With its robust steel construction and adjustable settings, it provides the versatility required for demanding tillage tasks.

Technical Features

Construction Material	High-strength steel
Adjustable Parameters	Disc Angle, Ploughing Depth, Ploughing Width
Hitch System	Robust tractor-mounted hitch system

Performance Metrics

Operational Capabilities

- Independently rotating discs for optimal soil turnover
- Versatile application across various soil types
- Durable frame for long service life
