

Tractor-Mounted Potato Planter

This potato planter is a specialized agricultural machine for planting potatoes efficiently. It ensures uniform seed spacing and depth for optimized crop yield.

Overview

High-Efficiency Potato Planting

The 2CM-4 Tractor-Mounted Potato Planter is a specialized agricultural implement designed for precision and reliability in large-scale farming operations. This four-row planter ensures uniform seed spacing and optimal planting depth, which are critical factors for maximizing crop yield. Built for durability and ease of operation, it features adjustable settings to accommodate various field conditions and potato varieties, making it an essential tool for professional agricultural productivity.

Technical Specifications

Required Tractor Power

66 kw

Minimum Power

Model	2CM-4
Number of Sowing Lines	4
Suspension Type	Trifilar suspension

Performance Metrics

Production Efficiency

8 mu/h

Efficiency

Planting Distance	140-400mm (adjustable)
Row Spacing	900 mm
Planting Depth	140-250mm

Physical Dimensions

Machine Dimensions (L×W×H)	2150×4100×1700 mm
Total Machine Mass	1250 kg

Quality Standards

Operational Reliability
