Product Overview

High-Efficiency Rotary Cultivator

This tractor-mounted rotary cultivator is engineered for superior soil preparation and efficient seedbed creation. Designed specifically for compatibility with L5018 tractors, the unit balances a tough, durable frame with a lightweight construction to enhance fuel economy and field maneuverability. With its hardened components and specialized arm system, it offers consistent performance and ease of use in demanding agricultural environments.

Technical Specifications

Blade Thickness	7 mm
Compatible Tractor Models	L5018
Model Designation	RX183 SP

Key Features

Design Enhancements

- Hardened U-joint tube for extended lifespan
- Protective rubber coating on U-joint cross area
- Specialized center arm for high lifting
- PTO-engaged lifting capability
