

Tractor-Mounted Rotary Tiller

This 1GN series rotary tiller adopts a middle gear transmission system and is designed for tractors of 12-50HP. After tillage, the tractor wheel tracks are completely covered because the working width is much wider.

Product Overview

Versatile 1GN Series Rotary Tiller

The 1GN series rotary tiller is engineered with a middle gear transmission system, offering robust performance for diverse agricultural soil preparation needs. Designed for efficiency, the unit provides a working width sufficient to cover tractor wheel tracks completely in a single pass. This versatile implement is optimized for both dry land and paddy field applications, significantly reducing time and labor costs for professional operators.

Technical Specifications

Tractor Compatibility

12 HP

Minimum Power

50 HP

Maximum Power

Transmission System

Middle gear transmission

Key Features

Operational Benefits

- Reduced labor requirements
- Time-efficient soil cultivation
- Cost-effective land preparation
- Full coverage of tractor wheel tracks

Suitable Fields

Dry Fields, Paddy Fields
