

Trailer-Mounted Concrete Pump with Articulating Boom

This mobile concrete pump is mounted on a trailer and features a multi-section articulating boom. It is equipped with a pumping system that includes a hopper and hydraulic controls for efficient concrete placement.

Product Overview

Versatile Concrete Placement Solution

This trailer-mounted concrete pump is engineered for construction sites requiring high flexibility and extended reach. It features a multi-section articulating boom that allows for precise concrete placement in complex architectural environments. The integrated pumping system, complete with a hopper and hydraulic controls, ensures efficient operation for various pouring applications.

Key Performance Metrics

Performance Highlights

1 Trailer
Mounting Type

1 Articulating
Boom Type

Technical Configuration

Mounting System	Trailer-mounted for mobile transport between job sites
Boom Design	Multi-section articulating boom for precise reach

Operational Components

Pumping System

- High-capacity receiving hopper
- Integrated hydraulic control system
- Multi-section delivery boom

Control System

Hydraulic Controls

Applications

Ideal Applications	Construction Sites, Flexible Concrete Pouring, Extended Reach Projects, Mobile Concrete Placement
