

Trailer Mounted Concrete Pump with S-Valve and Diesel Motor

This trailer-mounted concrete pump is equipped with an S-valve and powered by a diesel motor. It is designed for efficient concrete placement in various construction applications.

Overview

High-Performance Concrete Pumping Solution

This trailer-mounted concrete pump features a world-renowned S-valve design paired with wear-resistant alloy components for enhanced operational longevity. Engineered for versatility, it offers seamless switching between high and low-pressure modes to suit diverse construction requirements. The unit combines advanced global hydraulic and electrical components with a high-efficiency engine to ensure reliable, stable performance on demanding job sites.

Technical Specifications

Control & Automation

- Programmable Logic Controller
- Intelligent Control Modules
- Manual/Automatic Pressure Switching

Structural Components

- Wear-resistant alloy concrete chute
- Wear-resistant alloy spectacle-like blade
- High-durability cut ring
- Premium imported rubber hoses

Hydraulic System

Constant Power, Four-way Air Cooling, Automatic Lubrication

Performance

Operational Highlights

Noise Reduction • Automatic Lubrication • High/Low Pressure Toggle • Heavy-duty Durability
