

Transformer Skeleton Bobbin for POT2302 Cores

Designed for POT2302 series cores, this transformer skeleton bobbin provides a reliable mounting solution for transformer windings. It is constructed from high-quality insulating material, ensuring optimal electrical performance and safety.

Product Overview

High-Performance Transformer Skeleton

This transformer skeleton is expertly engineered for use with POT2302 series cores, offering a robust and reliable mounting solution for your winding requirements. Constructed from high-quality insulating materials, it ensures optimal electrical safety and consistent performance in demanding electronic environments. Designed with precision, it allows for secure core fitting and stable positioning, making it an ideal choice for compact power supplies, inverters, and high-efficiency transformer assemblies.

Technical Details

Compatible Core Series	POT2302
Common Applications	Power Supplies, Inverters, Electronic Transformers

Material and Design

Core Design Features

- High-quality insulating material
- Precise dimensional accuracy
- Secure core locking mechanism
- Compact form factor
