

Triangular LED Sensor Light for Illumination Systems

This sensor light is designed for use in illumination systems. It features a triangular design, centrally located LEDs, and a sensor for automatic activation.

Product Overview

Advanced Illumination Solution

This triangular LED sensor light is engineered for high-performance illumination systems in commercial or industrial environments. The unit features three integrated LEDs paired with a high-sensitivity sensor for automated activation based on motion or light levels. Its durable plastic housing ensures long-term reliability in demanding operational settings.

Technical Details

LED Count	3
Form Factor	Triangular
Material	Durable Plastic

Features

Activation	Automatic
Sensor Technology	Motion Sensing, Light Sensitive
