

# Triple Chaining Front Derailleur

This front derailleur is designed to shift the chain between different chainrings. It is compatible with triple chaining setups and designed for a maximum of 42 teeth on the largest chainring.

## Product Overview

### Precision Shifting Performance

This triple chaining front derailleur is engineered to provide smooth and reliable gear transitions for bicycles equipped with triple cranksets. Featuring a durable metal cage and robust mounting hardware, it ensures secure attachment to the frame for consistent performance. Designed specifically to handle setups with a maximum of 42 teeth on the largest chainring, this component is an ideal choice for maintaining efficient drivetrain operation.

## Technical Specifications

### Max Chaining Size

**42 T**

Max Teeth

Compatibility	Triple Chaining, Front Derailleur
Material	Metal
Mounting Hardware	Yes
