

Triplex Mud Pump Fluid End Module

This triplex mud pump module is a robust component for high-pressure fluid pumping. Its durable construction ensures reliable performance in demanding environments, with a compact form factor that contributes to efficient operation.

Product Overview

High-Performance Fluid End Module

This triplex mud pump fluid end module is designed for demanding high-pressure fluid pumping applications in oil and gas and industrial drilling environments. Engineered for reliability, this component features a robust design that ensures efficient operation and optimal fluid dynamics. It is built to meet or exceed international quality standards, providing seamless integration for existing drilling systems.

Standards and Quality

Certifications

API-7K

Technical Specifications

Compatibility

OEM Exchangeable

Primary Applications

- Oilfield drilling
- High-pressure fluid pumping
- Industrial pumping systems

Part Identifier

7K-0448

Construction Material

High grade premium alloy
