

Truck and Bus Directional Drive Tire

This is a directional drive tire designed for demanding applications. It features enhanced durability for reliable performance in tough conditions.

Product Overview

Rugged Durability for Demanding Applications

The Truck and Bus Directional Drive Tire is engineered for maximum performance in challenging environments. It features a specialized directional tread pattern that delivers superior traction and handling, particularly during off-road operations. The robust construction includes a high-capacity bead design and cut-resistant compounds, ensuring long service life and reliability for commercial vehicles.

Technical Specifications

- Stronger bead design
- Prevent bead area issues during off road operation
- Offer better loading capacity
- Unilateral deep grooves with stone ejector
- Longer life and prevent stone pinching
- Mileage and grooves bottom cut resistance

Engineered for durability: stronger bead design and effective stone ejection features.

Tire Dimensions	315/80R22.5
Load Index	155/152L
Ply Rating	16

Key Features

Features & Benefits

- Special tread compound
- Improved compound tear/cut resistance under off road condition
- Long life and wear

- Directional pattern design
- Better traction under off road operation
- Better grip and control

Special tread compound and directional pattern design for enhanced off-road performance.

Engineered Benefits

- Directional pattern for enhanced off-road traction
- Specialized tread compound for tear and cut resistance
- Stronger bead design for increased loading capacity
- Integrated stone ejectors to prevent stone pinching
- Deep grooves for extended service life

Best For

Off-road operation, Heavy-duty commercial, Tough applications
