

# Truck Loading Belt Conveyor for Bags

This conveyor system is designed for loading bags weighing 50-100kg onto trucks. It features a small belt conveyor with a PVC belt for efficient material handling.

## ADDITIONAL IMAGES

## Overview

### High-Efficiency Truck Loading Solution

This versatile belt conveyor system is specifically designed for the rapid loading and unloading of bags weighing between 50kg and 100kg. By combining PVC belt technology with robust roller sections, it streamlines material handling in logistics, manufacturing, and food processing environments. The system is engineered to reduce manual labor while maximizing throughput for truck-based distribution.

## Performance & Capacity

### Load Capacity per Bag

**50 kg**

Minimum Bag Weight

**100 kg**

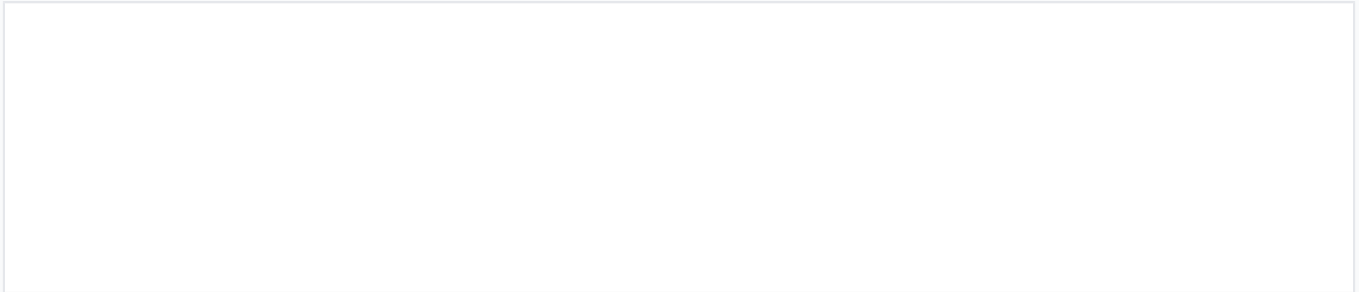

Maximum Bag Weight

## Technical Specifications

<b>Belt Material</b>	PVC (Polyvinyl Chloride)
<b>Conveyor Components</b>	Belt Conveyor, Roller Conveyor, Inclined Section, Horizontal Section, Curved Section
<b>Frame Material</b>	Durable metal / Stainless steel options
<b>Power Source</b>	Electric motor for automated transport

## Features & Design

### Key Features

- Adjustable height and inclination for flexible truck alignment
- Variable speed control for throughput management
- Compact, space-saving design for facility efficiency
- Low maintenance requirements
- Yellow safety guards for operational protection
- Adjustable supports for stability on uneven surfaces

## Applications

### Suitable Industries

Food & Beverage • Logistics • Packaging • Manufacturing • Warehousing

## Compliance & Quality

### Quality Standards

ISO 9001:2000

## System Capabilities

### End-of-Line Solutions

- Conveying & Delivery Systems
- Packing Machine Integration
- Palletizer Robot Compatibility
- Vertical Elevator Systems
- Stereoscopic Warehouse Integration
