Product Overview

Advanced Fleet Monitoring

This tire pressure monitoring system (TPMS) sensor is engineered specifically for heavy-duty truck applications. By providing real-time tire pressure data to the vehicle's onboard computer, it helps maintain optimal tire performance and safety. The sensor features a rugged construction designed to withstand harsh environmental conditions and long-haul operation.

Technical Specifications

Installation Features

- Threaded connection for valve stems
- Knurled outer edge for enhanced grip
- Secure metallic mounting bracket

Materials

Durable Metal, Industrial Plastic

Compliance and Usage

Application

Commercial Trucking • Heavy-Duty Fleet
