Product Overview

High-Efficiency Single Buffing Solution

The PG30 Single Buffing Machine is a robust industrial solution designed for the precision polishing of tubes, rods, and cylindrical parts. It is engineered to deliver a high-quality surface finish across various materials, including metals and plastics, ensuring consistent results for professional applications. Equipped with safety features like protective guards and a high-performance motor, this machine is ideal for achieving smooth, professional-grade finishes in a production environment.

Key Features

- Robust industrial construction
- High-performance motor for efficient operation
- User-friendly control panel
- Integrated safety protective guards
- Suitable for cylindrical and tubular workpieces

Technical Specifications

Performance Highlights

1 Set Buffing Station	100 % Efficiency Rating
---------------------------------	-----------------------------------

Model	PG30
Machine Type	Single Buffing Machine
Compatible Materials	Metal, Plastic, Cylindrical Parts, Tubes, Rods

Operational Safety

Safety & Compliance

Protective Guards • Operational Instructions • Directional Safety Warning

Operational Requirements

Strictly prohibited from reversing rotation during operation.
