

# Tubular Heating Element Assembly

This heating element assembly is designed for industrial or commercial applications. It features multiple tubular heating elements arranged in parallel and mounted within a metallic frame.

## Product Overview

### Industrial Tubular Heating Solution

This tubular heating element assembly is engineered for high-performance thermal regulation in industrial refrigeration and ventilation systems. The robust design utilizes multiple parallel heating elements mounted within a durable metallic frame to ensure efficient heat distribution and consistent performance. Integrated electrical terminals and versatile mounting hardware allow for seamless installation and integration into complex commercial equipment.

## Technical Specifications

### Key Features

- Integrated electrical power terminals
- Durable metallic frame construction
- Optimized for efficient heat transfer
- Pre-drilled mounting hardware included

<b>Element Configuration</b>	Parallel tubular heating elements mounted in a metallic frame
<b>Suitable Applications</b>	Refrigeration, Ventilation, Industrial Heating, Commercial Equipment
