

# Tungsten Carbide Brush Cutter Blade

This circular saw blade is designed for brush cutters. It features tungsten carbide tipped (TCT) teeth for enhanced cutting performance and durability when cutting through thick grass, weeds, and small bushes.

## Product Overview

### Professional Performance for Brush Clearing

This circular saw blade is specifically engineered for use with brush cutters, utilizing high-quality tungsten carbide tipped (TCT) teeth to ensure superior cutting performance and extended service life. The design incorporates weight-reduction holes that effectively minimize vibration, providing the operator with improved control and reduced fatigue during extended use. It serves as a reliable solution for clearing thick grass, dense weeds, and small bushes in both professional landscaping and home gardening environments.

## Technical Details

### Recommended Applications

- Thick grass
- Weeds
- Small bushes

Material	Tungsten Carbide Tipped
----------	-------------------------

## Packaging

Packaging Type	Double blister card
