

Tungsten Carbide Gritted Circular Saw Blade

This circular saw blade features tungsten carbide grit for enhanced cutting performance on hard materials. Its steel body and gritted edge ensure durability and precision in various cutting applications.

Product Overview

High-Performance Cutting Solution

This circular saw blade is engineered with a tungsten carbide gritted edge, specifically designed to handle hard and abrasive materials with ease. Its durable steel body ensures stability during operation, while the grit coating provides superior cutting longevity and precision. This tool is an essential asset for professional applications requiring a clean finish on challenging surfaces.

Technical Specifications

Application Compatibility

- Hard materials
- Abrasive surfaces
- General construction cutting

Material Composition

Steel Body, Tungsten Carbide Grit

Compatibility

Arbor Compatibility

Standard Arbor Holes • Multiple Sizes Available
