

Tungsten Carbide Tipped Annular Cutter

These annular cutters feature tungsten carbide tips for drilling steel plates. They are suitable for creating precise and clean holes in various industrial and manufacturing applications.

Product Overview

High-Performance Drilling Solution

These Tungsten Carbide Tipped (T.C.T) annular cutters are engineered for professional drilling in steel plates and heavy-duty metal components. Featuring high-grade imported carbide tips, these tools provide superior cutting efficiency, extended tool life, and precise, burr-free hole production. Designed for compatibility with magnetic drills, they ensure smooth cutting action and reduced vibration across various industrial and fabrication applications.

Technical Specifications

Key Performance Indicators

100 mm
Cutting Depth

82 mm
Diameter

Product Advantages

- Imported high-quality carbide tips
- Burr-free hole production
- Reduced vibration geometry
- Universal compatibility with rotary cutting tools

Tool Type

Tungsten Carbide Tipped (T.C.T) Annular Cutter

Target Applications

Steel Plate Drilling, Metalworking, Construction, Industrial Fabrication
