

Tungsten Carbide Tipped Circular Saw Blade

Circular saw blade designed for cutting wood and other materials. It features tungsten carbide-tipped teeth for durability and long life and is precision balanced for smooth, accurate cuts.

Product Overview

Tungsten Carbide Tipped Efficiency

The WGZ series alloy saw blades are engineered specifically for demanding wood cutting applications. Featuring high-durability tungsten carbide-tipped teeth, these blades are precision balanced to ensure smooth and accurate results during operation. Designed to maintain sharpness over extended use, they provide professional-grade reliability across a variety of circular saw equipment.

Technical Specifications

Primary Applications

- Wood cutting
- General carpentry
- Cross-cutting
- Rip-cutting

Key Features

Precision Balanced • High Durability • Long Life

Construction

Tungsten Carbide Tipped, Alloy Steel
