

Tungsten Carbide Tipped Circular Saw Blade

This tungsten carbide tipped (TCT) saw blade is designed for precise cutting of wood, plastic, and non-ferrous metals. It features a hardened steel body, optimized tooth geometry, and expansion slots for reduced noise.

Product Overview

Professional TCT Circular Saw Blade

This high-performance Tungsten Carbide Tipped (TCT) saw blade is engineered for precision cutting across diverse materials including aluminum profiles, wood, and plastic. Featuring a robust, hardened steel body and optimized tooth geometry, it ensures smooth, professional-grade cuts while maintaining long-term durability. Integrated expansion slots significantly reduce operational noise and vibration, making it an ideal choice for circular, miter, and table saws in industrial environments.

Technical Specifications

Compatible Machinery

- Circular Saws
- Miter Saws
- Table Saws

Blade Material	Tungsten Carbide Tipped Steel
Suitable Materials	Aluminum Profiles, Wood, Plastic, Non-ferrous Metals
Arbor Size	Standard

Key Features

Performance Advantages

Noise Reduction • Vibration Damping • High-Precision Cuts • Hardened Durability
