

Tunnel Lining Formwork

Heavy-duty steel formwork is designed for precise casting of concrete tunnel linings. It features adjustable segments and hydraulic cylinders for efficient stripping and repositioning.

Product Overview

Heavy-Duty Tunnel Lining Formwork

This robust steel formwork is engineered for the precise casting of concrete tunnel linings in demanding environments. Designed with adjustable segments, it accommodates various tunnel diameters while ensuring structural integrity. It features integrated hydraulic systems for efficient stripping and repositioning, making it an essential tool for underground construction, mining, and large-scale infrastructure projects.

Technical Specifications

Design Features

- Adjustable segments for various diameters
- Robust frame construction
- Integrated lifting points

Material	High-strength steel
----------	---------------------

Operational Capabilities

Hydraulic System	Yes
Suitable Applications	Underground Construction, Mining, Infrastructure Projects
