

# Tunnel Segment Casting Mould

This precision-engineered steel mould is designed for efficient production of tunnel segments. The robust mould ensures dimensional accuracy and structural integrity of concrete tunnel linings.

## Product Overview

### Precision-Engineered Tunnel Segment Moulding

This industrial-grade steel mould is meticulously engineered for the high-volume production of concrete tunnel segments. Featuring a robust curved design with integrated reinforcing ribs, it provides exceptional dimensional accuracy and long-term structural integrity. Designed for demanding infrastructure projects, the unit incorporates hydraulic systems to facilitate efficient segment ejection and operational control.

## Technical Specifications

### Primary Application

- Infrastructure Projects
- Tunnel Lining Production
- Precast Concrete Manufacturing

|                       |   |
|-----------------------|---|
| Construction Material | High-grade structural steel   |
| Model Identifier      | L2-5  |
| Key Features          | Reinforced Ribbing, Hydraulic Integration, Precision Casting, High-Durability Steel |
