

Turbo Concrete Grinding Cup Wheel

Turbo cup wheel is engineered for efficient grinding and material removal. Its durable construction and strategically placed segments ensure optimal performance and longevity on concrete, stone, and masonry.

Product Overview

Turbo Concrete Grinding Cup Wheel

This high-performance Turbo Concrete Grinding Cup Wheel is engineered for efficient material removal on hard surfaces. Its robust construction ensures long-lasting durability, while the specialized turbo segment design facilitates improved airflow. This design significantly reduces heat buildup and dust accumulation, resulting in a cleaner and more productive grinding experience for professional masonry and stone applications.

Technical Details

Key Performance Indicators

- Optimized turbo segment configuration
- Advanced airflow management
- Reduced thermal degradation
- Efficient dust extraction support

Application Compatibility

Concrete, Stone, Masonry
