

TV Antenna Rotator

This TV antenna rotator is designed to remotely control the direction of a television antenna. It allows users to optimize signal reception by adjusting the antenna's orientation.

Product Overview

Precision Antenna Control

This high-performance TV antenna rotator is engineered to provide remote control over your television antenna's orientation. By allowing users to precisely adjust the antenna's direction, it enables optimization of signal reception for clearer broadcasting. Built with a durable housing and a weather-resistant cap, this unit is designed to withstand outdoor conditions while providing reliable motorized control.

Technical Specifications

Interface

- Power input port
- Control cable interface

Outdoor Compatibility

Yes

Housing Design

Cylindrical housing with rotating head

Key Features

Remote Control, Weather-Resistant, Motorized, Signal Optimization
