

TV Encryption System Configuration Interface

This configuration interface is designed for TV encryption systems. It allows users to manage system parameters, database settings, and user management.

System Overview

Centralized Encryption Management

This encryption system configuration interface provides a robust software solution for managing TV signal security parameters. It enables precise control over scrambling machine settings, ECMG and EMMG port configurations, and database connectivity. Designed for professional broadcast infrastructure, the interface ensures stable communication between the encryption machinery and user management systems.

Network Connectivity

Network Configuration

Parameter	Default/Fixed Value
Host Address	10.0.2.202
Database Host	1001 252
ECMG Port	4004
EMMG Port	5000
User Management Port	3008

System Status

Operational Status

1 ID

Scrambler Data ID

300 ver

Management System Version

Active Connections

ECMG Online, EMMG Online
