

Twin-Cylinder Piston Air Compressor

This air compressor is designed with a twin-cylinder pump for high air output and rapid tank pressurization. It includes a large-capacity air tank to reduce motor starts and extend the compressor's lifespan.

Product Overview

High-Performance Air Compression

This twin-cylinder piston air compressor is engineered for robust industrial and commercial applications requiring reliable power. Featuring a heavy-duty electric motor, it delivers high air output and rapid tank pressurization to maintain consistent workflow. The large-capacity tank design minimizes motor cycling, extending the overall service life of the unit, while the mobile, wheeled base ensures excellent portability across the workspace.

Technical Specifications

Pump Configuration	Twin-Cylinder
Motor Type	Heavy-duty Electric

Features

Key Features	Wheeled Base, Pressure Gauge, Safety Valve, Pressure Regulator, Large-Capacity Tank
--------------	---

Safety & Control

Safety Systems

- Integrated pressure monitoring gauge
- Safety relief valve
- Adjustable pressure regulation
