

Twin Shaft Concrete Mixer

This twin shaft concrete mixer is designed for efficient concrete mixing. Its robust construction is suitable for demanding construction site applications.

Product Overview

Professional Concrete Mixing Solution

The JS1000 Twin Shaft Concrete Mixer is a high-performance, heavy-duty solution engineered for rigorous construction environments. Its robust dual-shaft design ensures uniform and rapid mixing of aggregates, cement, and water. Built with safety and durability in mind, this equipment provides consistent output for large-scale infrastructure and building projects.

Technical Specifications

Model Designation	JS1000
Mechanism	Twin Horizontal Shafts
Mixing Method	Forced Mixing
Core Features	Heavy-Duty Construction, Material Input Hopper, Integrated Access Ports, Reinforced Support Structure

Safety and Compliance

Safety Notices

- Do not stand under the hopper during operation
- Follow all posted site safety protocols
- Ensure access ports are secured before activation
