

# Two-Color Injection Mold with Rotational System

This two-color injection mold is engineered with a rotational system. It facilitates the production of dual-colored or multi-material components with precision and efficiency.

## Product Overview

### Precision Two-Color Injection Molding

This advanced two-color injection mold features a specialized rotational system designed for the efficient production of dual-component plastic products. Engineered for high-precision manufacturing, this mold enables the seamless integration of two materials or colors in a single cycle. It is an ideal solution for creating complex multi-material parts with consistent quality and professional finish.

## Manufacturing Capabilities

### Molding Technology

Two-Component Injection, Rotational Molding, Multi-Material

## Application Gallery

### Application Example

Decorative serving trays featuring a tiered clover design with integrated dual-color trim.
