

Two-Color Offset Printing Machine

This two-color printing machine is engineered to produce high-quality printed materials. It is equipped with an advanced inking system and a precise paper feeding mechanism.

Overview

High-Performance Offset Printing

This two-color offset printing machine is designed for precision, efficiency, and reliability in commercial printing environments. Featuring an advanced turnover mechanism and an intelligent touch-screen control system, it ensures perfect printing quality with 0.01mm precision. The robust construction, including a super-strong casting iron board, guarantees long-term stability and durability for high-volume production.

Technical Performance

Printing Precision

0.01 mm
Precision

Key Features

Automatic Plate Changer, Alcohol Plate Dampening, Pneumatic Control, Automatic Lubrication, Continuous Suction Feeding

Mechanical Design

Transmission System

High-precision skew gear transmission for low noise and smooth, anti-impact operation.

Construction

Super strong casting iron board with a structure design similar to large-scale offset presses.

Control & Operation

Automation Functions

- Automatic Inking
- Automatic Dampening
- Turnover Adjustment
- Automatic Plate Changer
- Automatic Lubricating

Control System

Intelligentized touch screen control system allowing for vertical and circle adjustments without stopping the machine.
