

# Two-Component Injection Mold

This injection mold is designed for creating two-component parts. It is specialized for custom two-color molding applications, including rotational and double-color over molding.

## ADDITIONAL IMAGES

## Product Overview

### Precision Injection Molding

This two-component injection mold is engineered for high-efficiency production of dual-material plastic items, such as household citrus juicers. Designed with advanced rotation technology, the mold enables complex, multi-color or multi-material assembly in a single manufacturing cycle. Its robust construction ensures durability and precise output for consistent, high-quality consumer goods.

## Technical Specifications

Molding Process Type	Two-component injection molding
Design Features	Two-color design, Rotational molding, Multi-material injection

## Applications

### Commonly Produced Items

- Manual citrus juicers
- Multi-material household kitchenware
- Rotational molded plastic components
