

# Two-Component Injection Mold

This injection mold is designed for two-component injection molding processes. It facilitates the creation of products with multiple colors or materials.

## Product Overview

### Precision Two-Component Molding

This specialized injection mold is engineered for advanced two-component manufacturing processes, enabling the production of items with dual-material or dual-color designs. Ideal for creating complex consumer goods like drinkware, this mold ensures consistent dimensions and a high-quality finish through precise material integration. Its design supports seamless integration of features such as ergonomic handles directly into the main product body.

## Manufacturing Capabilities

### Common Product Applications

- Multi-material drinkware
- Two-tone plastic household items
- Integrated handle consumer products

### Supported Mold Types

Two-Component Mold, Double Color Mold, Rotational Mold
