

Two-Pin Electrical Connector for Woodworking Machinery

This two-pin connector is commonly used in woodworking machinery for power or signal connections. It is designed for reliable and secure electrical connections within woodworking equipment.

Product Overview

Professional Woodworking Connector

This two-pin electrical connector is engineered for high-performance woodworking machinery, providing a reliable and secure link for power or signal transmission. Featuring a robust black housing designed for industrial environments, it ensures long-term durability under demanding shop conditions. The clear red and black wire configuration simplifies integration, making it an essential component for maintaining and upgrading woodworking equipment.

Technical Specifications

Connection Type	Two-pin electrical connector
Wiring Configuration	Red wire, Black wire
Housing Material	Durable black polymer

Applications

Primary Applications

- Woodworking machinery power supply
- Signal transmission in industrial equipment
- Equipment maintenance and repair
