

Two-Pole Induction Water Pump

This two-pole induction motor water pump is designed for continuous service. It features thermal protection and is suitable for various applications.

Overview

High-Performance Induction Water Pump

This two-pole induction water pump is designed for efficient, reliable water distribution in domestic and small-scale irrigation settings. Engineered for clean water applications, it is ideal for use with pressure sets for garden irrigation and home water supply. Its robust construction ensures durability, while the thermally protected motor provides enhanced safety and long-lasting performance.

Technical Specifications

Motor Type	Two-Pole Induction
Safety Features	Thermally Protected Motor

Usage Guidelines

Fluid Compatibility

- Clean water
- Non-abrasive liquids
- Chemically non-aggressive liquids

Primary Applications

Domestic Water Supply • Garden Irrigation • Pressure Sets • Water Circulation

Recommended Environment	Enclosed or sheltered from inclement weather
