

Two-Way Coaxial Cable Splitter 5-1000MHz

This two-way splitter is designed for splitting a single coaxial cable signal into two separate outputs. It is suitable for distributing TV signals and operates within a frequency range of 5-1000MHz.

Product Overview

Professional Signal Distribution

This two-way coaxial cable splitter is designed for efficient signal distribution within the 5-1000MHz frequency range. It provides a reliable method to split a single incoming signal into two identical outputs with balanced performance. Engineered for durability, it is an ideal solution for TV signal distribution in residential or commercial systems.

Technical Specifications

Insertion Loss

3.7 dB

Insertion Loss per Output

Frequency Range	5-1000MHz
Output Ports	2

Compliance and Features

Model Identifier	LD-2W102
Primary Application	TV Signal Distribution, Coaxial Networks
