

Two-Way Network Splitter

This two-way splitter is designed to split a single input signal into two output signals. Its features include robust metal construction and standard connectors, ensuring easy installation and versatile placement within various communication networks.

Product Overview

Professional Network Signal Distribution

This two-way network splitter is engineered to efficiently divide a single input signal into two distinct output signals. Constructed with a robust metal housing, it ensures durability and signal integrity for demanding communication environments. Its compact design allows for versatile installation options, making it an ideal choice for various professional network infrastructure setups.

Technical Specifications

Functionality	Signal Splitting (1 Input to 2 Outputs)
Housing Material	Metal
Installation	Standard Connectors, Easy Installation, Compact Design

Application

Suitable Applications

- Communication Networks
- Signal Distribution
- Network Infrastructure
