

UCAK200 Series Ball Bearing Unit

The UCAK200 series ball bearing units feature a sealed ball bearing housed in a cast iron or steel housing. These pre-lubricated units are designed for easy installation and reliable performance in conveyor systems and agricultural machinery.

Product Overview

UCAK200 Series Overview

The UCAK200 series ball bearing units are engineered for robust performance in demanding industrial environments. These units feature a sealed ball bearing encased in a durable cast iron or steel housing, ensuring superior protection against contaminants. Designed for convenience, they come pre-lubricated and ready for immediate installation, while the bearing insert accommodates slight misalignment to reduce stress and extend service life.

Design & Construction

Housing Material	Cast Iron, Steel
Pre-Lubricated	Yes
Misalignment Compensation	Yes
Mounting Angle	45 °

Applications

Common Applications

- Conveyor systems
- Agricultural machinery
- Heavy-duty equipment
