

UHF 14-69 TV Antenna

This UHF antenna is designed for optimal UHF signal reception. Featuring a robust construction with multiple elements, this antenna ensures high gain and excellent directivity.

Product Overview

High-Performance UHF Reception

The UHF 14-69 TV Antenna is engineered for superior signal reception across the UHF spectrum. Its multi-element design provides high gain and excellent directivity, making it a reliable solution for both urban and rural television signal environments. Built for longevity, this antenna features robust construction capable of withstanding diverse weather conditions and comes with all necessary mounting hardware for simplified installation.

Technical Specifications

Antenna Gain

12 dB

Maximum Gain

Channel Compatibility

Channels 14-69

Front-to-Back Ratio

20 dB

Design & Features

Installation

- Included mounting hardware
- Simplified installation process
- Robust multi-element construction

Weather Resistance

All-Weather Design • Robust Construction
