

UHF Bow-Tie Antenna

This UHF bow-tie antenna is designed for optimal signal reception. It features a circular loop design with a bow-tie element for enhanced performance in the UHF frequency band.

Product Overview

Professional UHF Reception Solution

The WE-9009 UHF Bow-Tie Antenna is engineered for high-performance signal capture within the UHF frequency band. Featuring a specialized circular loop and bow-tie element design, it ensures reliable signal reception for television broadcasting and professional wireless communication systems. Its robust construction provides the durability required for long-term installation in diverse environments.

Technical Specifications

Model Number	WE-9009
Antenna Type	UHF Bow-Tie
Design Features	Circular loop, Bow-tie element, UHF optimized

Installation and Durability

Construction

Durable materials • Long-lasting performance

Installation	Easy-to-install design
