

UHF Wireless Microphone System with Dual-Channel Receiver

This UHF wireless microphone system provides clear and reliable audio transmission. It includes a dual-channel receiver with individual volume controls and two handheld microphones.

Overview

Professional UHF Wireless Microphone System

The PU-2802 is a robust UHF wireless microphone system designed for clear and reliable audio transmission in professional settings. This dual-channel system allows for the simultaneous use of two handheld microphones, making it an ideal choice for presentations, performances, and public speaking events. With its extended operating range and visual signal indicators, users can easily monitor audio activity and signal strength during operation.

Technical Specifications

Frequency Range	600-900 MHz
Frequency Response	40Hz-20kHz
Operating Range	60 M
Battery Voltage	AA 1.5V x 2

System Features

Build Material

- Plastic Handheld Microphones
- Plastic Receiver Chassis

Key Features

Dual-Channel Receiver, UHF Transmission, Individual Volume Controls, RF/AF Signal Indicators
