

Ultra-Low Temperature Medical Freezer

This ultra-low temperature freezer is designed for the safe and reliable storage of temperature-sensitive materials such as biological samples and vaccines. It maintains a stable and uniform temperature, typically reaching -45°C.

Overview

Reliable Cold Storage Solution

The DW-HW258SD is an ultra-low temperature freezer engineered for the safe and secure storage of sensitive biological samples, vaccines, and pharmaceuticals. Designed for laboratory and industrial settings, it maintains a stable, uniform internal environment to preserve sample integrity. The unit combines high-efficiency refrigeration with robust construction to ensure long-term reliability and precise temperature management.

Performance

Operating Temperature

-45 °C

Target Temperature

Safety & Control

Safety & Monitoring

Temperature Alarm, Power Failure Alarm, Digital Display, Precise Control Panel

Design & Build

Construction Details

- High-efficiency compressor
- Advanced insulation system
- Durable laboratory-grade materials

Model Number

DW-HW258SD
